

XCN - 1050

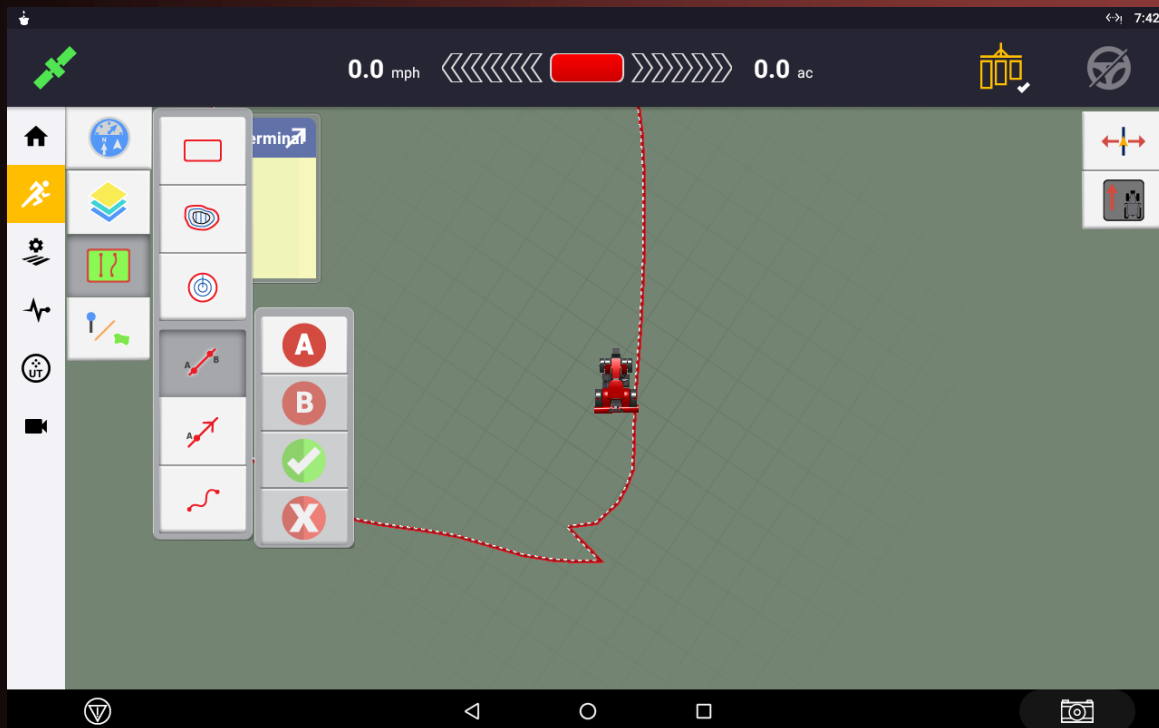

Creating a straight swath

In the Precision IQ run screen, select the run lines menu

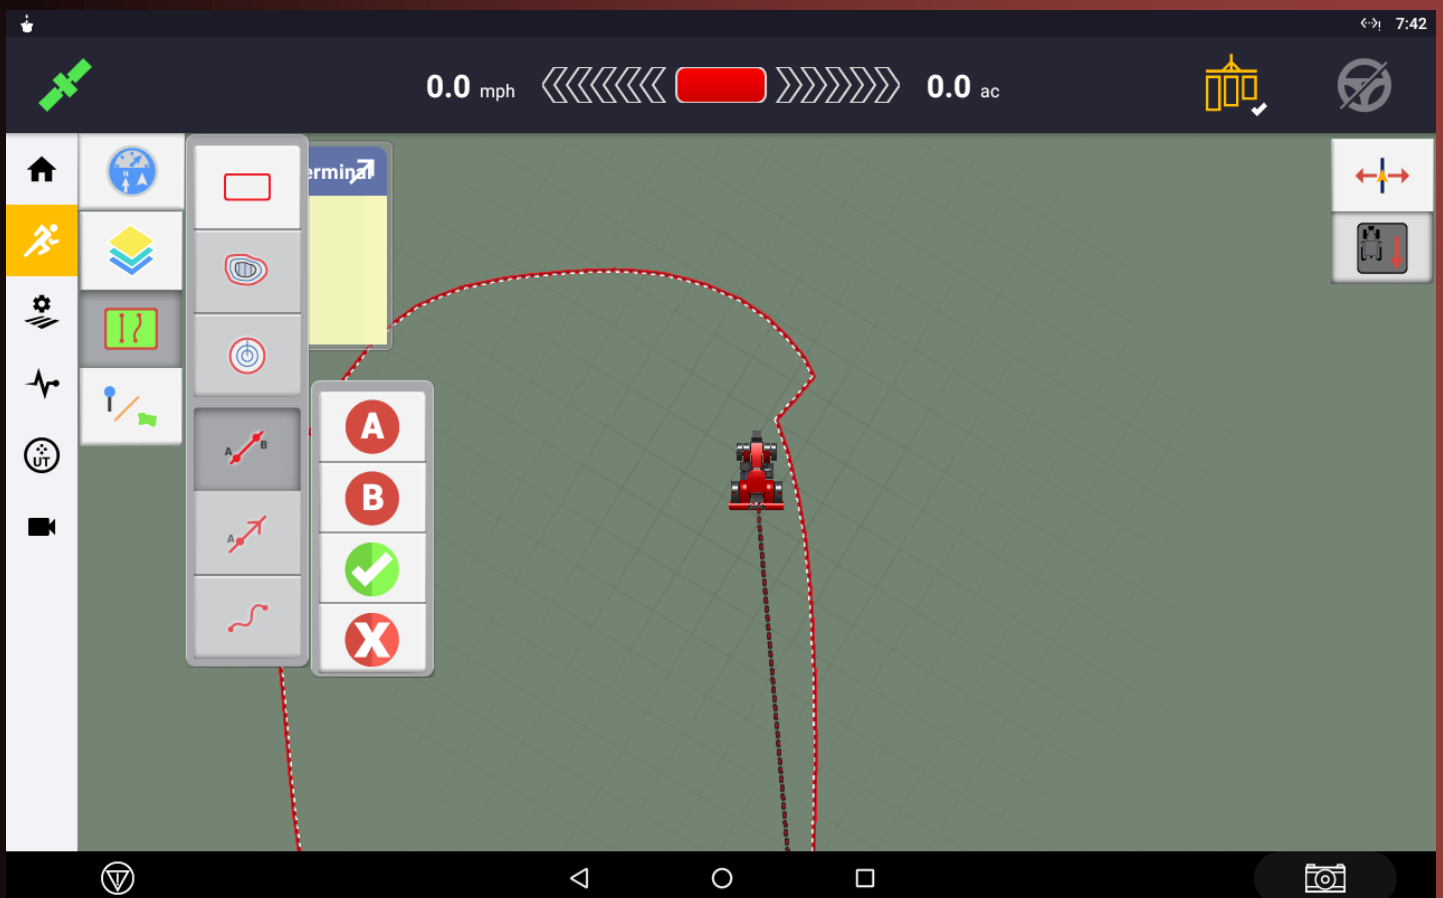

Select the AB button

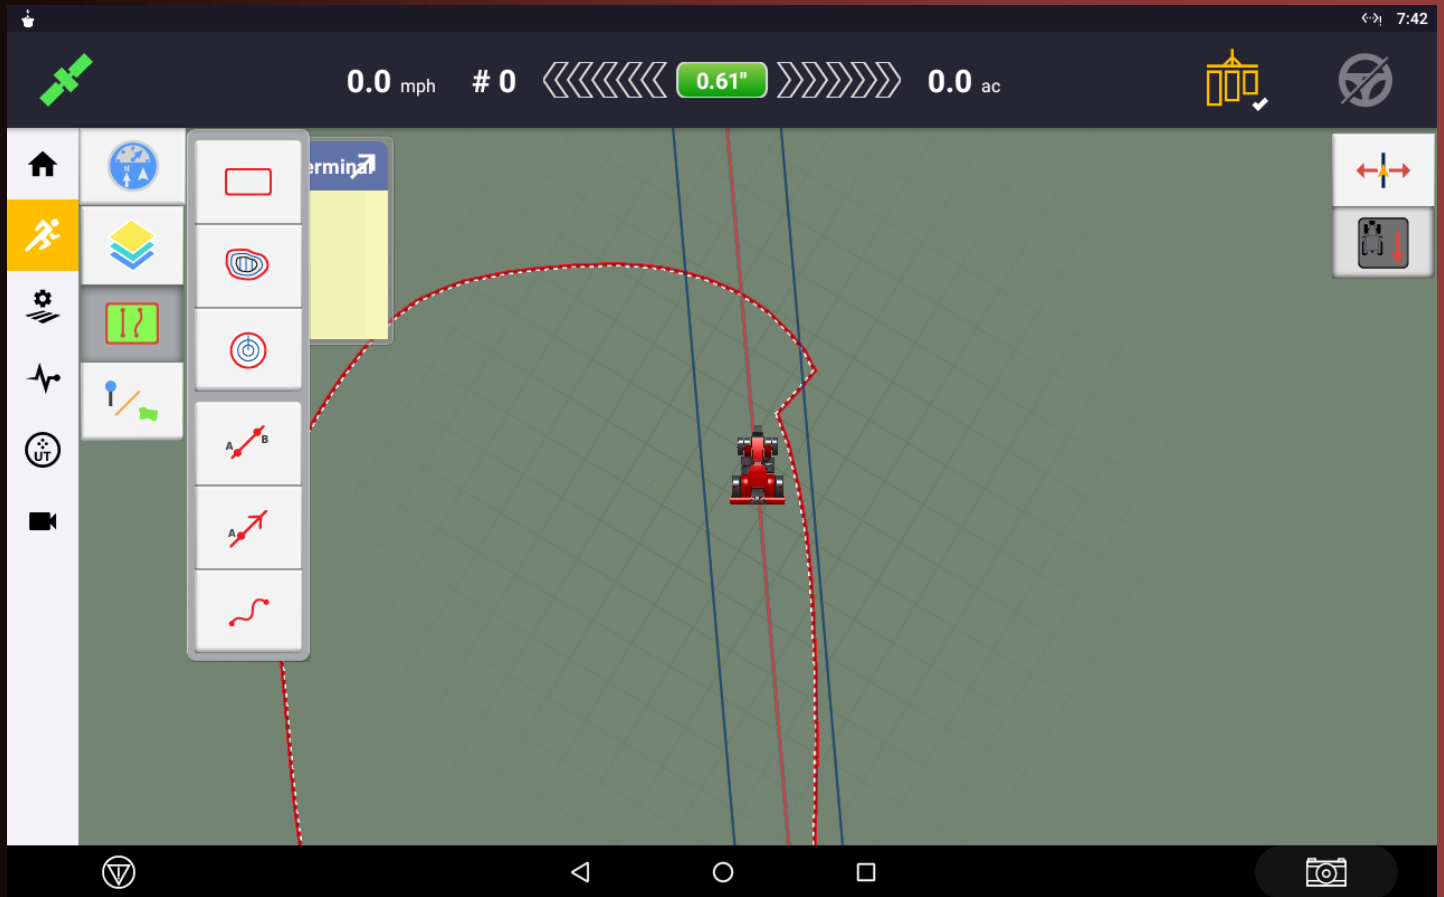

Select A to mark the starting position

Then drive forward, until you are happy with the B point, remember the further you travel the more accurate the line.

Select B when you are happy with the line, then press the green tick

You will now have lines appearing at perfectly spaced distances apart variable by changing your implement width

You can now engage on the line
